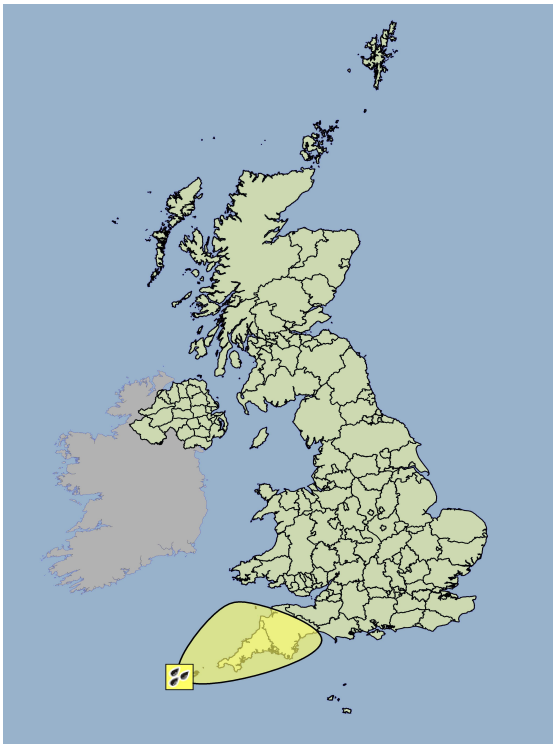
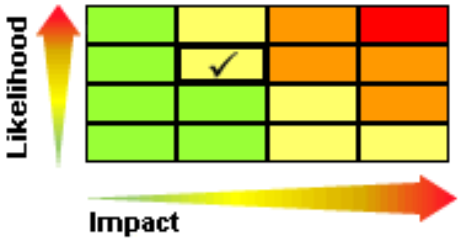
National Severe Weather Warning Service





Chief Forecasters Assessment
Active frontal troughs will move eastwards across the UK during Friday, bringing further strong winds and heavy rain to many places. The combination of very moist air and strong winds will give rainfall accumulations that have the potential for flooding disruption over parts of southwest England where the ground remains saturated.

The Met Office have issued a **Yellow Alert** of **Rain**

Valid from **00:05 on Fri, 24th Jan 2014** until **23:45 on Fri, 24th Jan 2014**

Bands of rain are expected to move eastwards across Cornwall and Devon during Friday. Rainfall accumulations of 10 to 20 mm are expected over most parts, with 30 to 40 mm possible over some areas, mainly windward coasts and hills. With the ground saturated over much of the region, the public should be aware of the risk of further local flooding and associated disruption.
